

COATING SYSTEM MACHINE

Our Pre - Applied Application Center is where it all starts!

Pre-Applied products are just a segment of our goals.

We, at **Tecnologic 3**, believe that the method used to apply our resins is an important aspect of our business as well as the process for applying that material.

We are continuously designing and developing new and **tailor-made application** equipment to guarantee **high quality**, performances so as to meet any of our customers' needs.

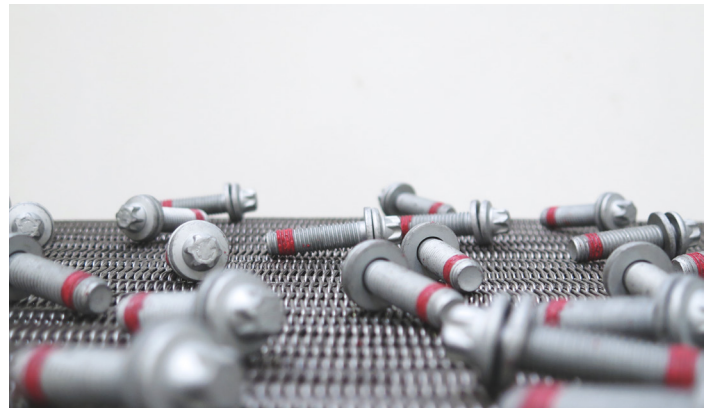

Our machines are designed with automated processing parts and dedicated quality checks to prevent errors when associated with a manual application.

Upon request we will include dedicated vision inspection devices for the in-line process checking and product quality control.

Equip the machine with following options, upon customer request, and with more than just a normal PLC:

- Display units/s for integrated operation
- Programming directly on the device
- Display and editing of message text/variables on the device

Our Technical assistance and service will guide you on all the initial phases of the project. The Technologic 3 machine is based on the TECNOLOGIC 3® patent.
