

# TECNOLOGIC RESINS WATER-BASED PRODUCTS

## **TECNOLOGIC PRE-APPLIED WATER-BASED RESINS**

Micro-encapsulated Strong and Medium capacity Adhesives for thread locking and sealing. A Powerful nonreactive Sealant coating for immediate use.

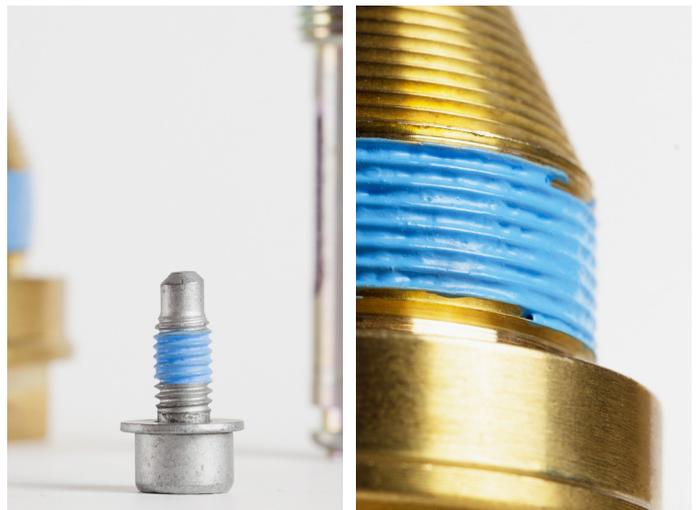

### **TECNOLOGIC 150 AND TECNOLOGIC 70 ADHESIVE**

The permanent non-tacky dried film coatings are non reactive until the assembled capsules are ruptured by shear and pressure. The Strong and Medium adhesives and sealants become effective on threaded parts.

### **SEALANT TECNOLOGIC 15**

The sealant which is applied forms a permanent dry nonreactive adjustable coating. The coated screw is ready for use. The sealant effect occurs during the assembly by the compression of the sealant between the mating screws. The flexible resin becomes highly effective especially when under a strong pressure and under high temperature.

Tecnologic 3 water based resins are the best applied solutions where a high standard safety and efficient production is required.

Tecnologic 3 resins (adhesive and sealant) are tested on the most used top coat in the industry.

Tecnologic 3 resins (adhesive and sealant) are tested in-house before being delivered around the globe.

Tecnologic resins are the outcome of the TECNOLOGIC 3<sup>®</sup> patent.
